

ad:vantages

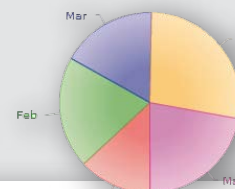

- Improving data quality by detecting duplicates
- Basis for optimisation of in-house search
- Tremendous time-savings for analyses
- Extensive overview of user behaviour
- Comprehensive statistic functions allow purposive analyses
- Export formats (CSV, PDF)

fact:sheet

- Search statistics (most searched terms with or without hits as well as context)
- Usage statistics (number of active and passive users, classified by days, weeks and months)
- Inventory report (duplicates, file type statistics)
- Click statistic (number of click and search result lists; preview clicks and file access clicks)
- Statistic widget for the inter:gator dashboard
- Admin report (indexing report; operating system report with memory report and CPU usage report)
- Error report

reports:center

The *inter:gator Report Center* is a component of the *inter:gator Enterprise Search* solut which allows for extensive analysis and interpretation.

The interpretation of search statistics and usage statistics is implemented by default as well as click statistics. Thus the most searched terms, the number of active users or the number of file access clicks can be analysed.

By detecting duplicates a higher data quality is created. This is the basis of a persistent optimisation of the in-house search.

By analysing the memory usage you keep the management of your network resources permanently in view and are able to detect use-intensive periods and can subsequently distribute existing resources.
