

intergator:

intergator is a cross-system search engine, knowledge management and analytics platform, that helps to save valuable working time. Within seconds your employees and customers are able to find all business-relevant information from millions of documents, emails, web pages and other datasets. Integrate intergator into your existing system and leverage an enterprise-wide search that takes access rights into account.

intergator:solutions

Enterprise Search

Company-wide semantic search within the internal information of an organization.

Content Analytics

On the Analytics platform indexed information can be dynamically processed and analyzed multidimensionally.

Knowledge Management

The search engine integrates all existing systems such as wikis, blogs, databases or Microsoft SharePoint seamlessly. So you are always up to date automatically.

InfoApps

Customized search applications to support all business processes e.g. in quality management, sales, customer service and human resource.

Social Intranet

Save valuable time: receive individual and bundled information and access shared information from colleagues.

Compliance

With intergator you automatically monitor the company-specific compliance rules of your information management.

intergator:components

Social Dashboard

Personalized, customizable research frontend with flexible adaptable InfoApps for notification of new matches, social bookmarking, shared search results and much more. With optional **InfoApps: Navigator** and **Expert Finder**

Analytics

With intergator Analytics you can create content analyses as well as analyses of utilisation and statistical evaluations with the help of interactive charts. Visualize your digital database via an Analytics Dashboard and thereby support decision-making processes.

Knowledge Capturing

Through a user friendly drag and drop functionality users can gather relevant information and upload files in a content store. If necessary, you can quickly and easily include your content into running processes.

Mobile Search

An easy-to-use interface with comprehensive preview functions that requires no further applications. Compatible with all common mobile devices.

Documentation Reader

Locating text passages within large documents quickly with visual highlighting, straight from the browser and without additional plug-in installations.

OCR Service

With this text recognition module text is acquired from scanned documents or images in PDF files – essential for an effective full-text search and automatic metadata extraction.
