

# intergator:

intergator is a cross-system search engine, knowledge management and content analytics solution, based in part on **machine learning**. With intergator you will be able to retrieve smart data from big contents, thereby facilitating your business processes and saving valuable work time. Within seconds your employees and customers will find business-relevant information from millions of documents, emails, websites and other data sources. Integrate intergator into your existing system and enable a company-wide search under consideration of access rights.

## Why intergator? Gain a competitive edge by

- improving decision making and advancing business processes
- boosting performance and productivity
- sharing knowledge effectively and improving collaboration
- increasing customer satisfaction
- maintaining information security and privacy issues
- being always and everywhere up to date: intranet & enterprise search to go

## intergator for ONE single point of access to all data sources

## Software & appliance solution

interface projects GmbH is the only German vendor to offer its Enterprise Search both as a software and as an appliance solution. The intergator Appliance is the perfect solution for customers striving for maximum performance with minimum integration efforts.

## intergator:Solutions

### Enterprise Search

Company-wide semantic and cross-lingual search within all internal information of an organization.

### Content Analytics

Using intergator Analytics, indexed information - both structured and unstructured - can be dynamically processed and analyzed in multiple dimensions.

### Knowledge Management

A seamless integration of existing systems such as wikis, blogs, databases or MS SharePoint into the targeted search provides permanent up-to-dateness.

### InfoApps

Customized search applications support business processes, e.g. in quality management, sales, customer service and human resources.

### Social Intranet

Valuable work time is saved by easily accessing individual, bundled and shared information.

### Compliance

Company-specific compliance rules are automatically monitored for the organization's information management.

## intergator:Components

### Social Dashboard

Personalized, customizable research frontend for notification of new matches, social bookmarking, shared search results and much more.

### Navigator

The navigator search perspective, based on a hyperbolic tree, allows a 360-degree visualization of all data and is particularly suited for exploratory search.

### Expert Finder

Find the most specialized employees in your company with the intergator Expert Finder, building upon named skills and topics!

### Analytics

With intergator Analytics you can produce content and usage analyses and statistical analyses by means of interactive charts.

### Content Management

Integrate your content easily and conveniently into existing processes to manage and archive editorial contents. The user-friendly drag and drop functionality allows for information to be conveniently uploaded to a content store.

### Mobile Search

An easy-to-use interface with comprehensive preview functions that requires no further applications. Compatible with all common mobile devices.

### Documentation Reader

Quickly locate text passages within large documents by means of the browser-integrated viewer and the visual highlighting of search hits. No additional plugins required.

### OCR Service

With this text recognition modul text is extracted from scanned documents or image PDF files. Essential for effective full-text search and automatic metadata extraction.
