

intergator at Weber Maschinenbau Breidenbach

Weber Maschinenbau GmbH, headquartered in Breidenbach/Hessen, is a specialized company for the food processing industry and among the world leaders in the field of high-performance cutting systems. Approximately 1.300 employees at 22 locations in 18 nations are employed by Weber Maschinenbau.

The reason for the enterprise search project was the need to improve knowledge management within the company, as expressed by different departments. In-depth analyses by the IT department led to a common result: The first step is to enable a company-wide, cross-system searching and finding of data and documents.

After internal workshops, market research and extensive testing, the decision was made for the cross-system search of intergator by the company interface projects GmbH from Dresden/ Germany. From a technical point of view, intergator convinced for example with the possibility to integrate the existing document management system d.3 from develop into the company-wide search. From a commercial perspective, intergator stood out from competitors in terms of price-performance ratio.

After a successful rollout, the intergator search is now the entry page for employees. By means of single-sign-on, no additional logon to the system is required and users are given the search results according to their authorizations.

In addition to d.3, other data sources such as various file servers, Microsoft Exchange, public pages of the MediaWiki, the weberweb.com website and the SAP module for merchandise management were integrated. For the SAP module, the search preview for orders views has been optimized, among other things. By installing an intergator appliance, maximum performance for up to 25 million index objects has been achieved with minimal technical integration overhead.

interface projects GmbH has specialized in the development of intelligent information management solutions. Its product intergator provides a company- and system-wide search with a comfortable and functional search interface. Time-consuming searching in different data sources is no longer required. intergator acts in accordance with the Federal Data Protection Act and is based on existing authorization concepts.
